Unlimited file attachments of all types

DISTRIBUTION
MANAGER
by Global Software, Inc.

Leverage Microsoft® Excel

With Distribution Manager for use with Microsoft® Excel, the distribution levels/profiles are created directly in Excel, and are thus displayed in a matrix format. Users can also reference equations in any worksheet within the active workbook.

Endless options

Distribution Manager for use with Microsoft® Excel allows users automated delivery of reports and files via email, print and archive. With this application, users can assign and save a different folder location for each control level, define the default value for converting formulas by user designations, and pass parameters into the new file to be distributed. Users also have the ability to set automatic calculation of the worksheet prior to distribution, giving the recipients the most up-to-date information. When distributing via email, users may email to an unlimited number of addresses, accessing their current address book. The emails are grouped by recipient, so each user receives a single email with multiple attachments- email consolidation at its finest.
